

Requirements Document

This system is designed to be a tool to view and create scenarios for the Treasure Box Braille (TBB) device. Through it, clients will be able open existing scenario files and create new ones from scratch.

Use Cases:

- Teachers creating scenarios for visually impaired students as a way to learn braille
- A dynamic way to read braille
- Viewing and editing existing scenario files
- Writing books for those who are visually impaired

Acceptance Test Cases:

- Successfully opens and correctly displays a scenario text file
- Allows editing and saving of a scenario text file (saves it in correct format)
- New scenario files can be created, edited and saved
